

## FACT SHEET

### Who is Gojira Labs?

Gojira Labs is a team of gamers, creatives, artists, brand experts, developers, and Web3 natives building the technology and games to empower NFTs to break free from their wallet-bound constraints and embark on thrilling adventures. At Gojira Labs, we believe in innovation through play – and that games can provide fun ways for people to fully experience the transformative power of Web3 through ownership.

### What is an aNFT?

Animatronic NFTs (aNFTs) are a new digital collectible format, invented and developed by Gojira Labs. aNFTs provide all of the necessary artwork components to create playable, animated game characters. The first use case for aNFTs is to enable holders of notable PFP (profile picture or 'picture-for-proof') NFT collections to spawn playable characters that correspond to their NFT. aNFTs can add entertainment and utility to well-known collections, such as Bored Ape Yacht Club, enabling holders to play games with the characters they own.

### How do aNFTs work?

The aNFT format is an exploded view of all the artwork components needed to animate a full-body character in a game. These components are designed to map easily to game animation rigs so they can be seamlessly deployed as a playable character. Initially, aNFTs will be compatible with Gojira Labs' proprietary flexible animation rig, code-named "Gooji."

### How are aNFTs animated in games?

Gojira Labs has developed a one-of-a-kind animation framework, codenamed "Gooji", to easily spawn aNFTs as in-game characters. Unlike most pre-built animation rigs, Gooji provides a flexible skeleton that is easily customizable to the anatomy and proportions of almost any character. The body part artwork components provided by the aNFT are mapped and overlaid to the Gooji template which can then be animated to perform the actions needed for the game. While currently this mapping and customization is done manually, Gojira Labs is working to automate the Gooji framework so that PFP collections with aNFT compatibility can be instantly deployed as playable characters.

## FACT SHEET

### What is Sprinft?

Sprinft, a multichain, multiplayer running game by Gojira Labs, will be the first game to feature aNFTs. At launch, the game will illustrate the aNFT experience by allowing users to connect a wallet and unlock playable characters representing select PFP collections.

In the near future, Gojira Labs will work with PFP collections to fully onboard them to the aNFT format, enabling users to spawn and collect a playable character that matches their NFT. Collections under review for support include Bored Ape Yacht Club, Sappy Seals, DeGods, CryptoPunks, Tezzardz, and Reddit Avatars.

Players will soon be able to spawn a character that matches the exact traits of the NFT they own. Through this process, they will mint (spawn) the corresponding aNFT and claim it in their connected wallet.

### What sets aNFTs apart?

Put simply, aNFTs bring games to NFTs, not the other way around. Many users have already invested in top-tier NFT collections, and with aNFT capability they will be able to engage with their community through friendly in-game competitions. Imagine spawning your Bored Ape and pitting it against a Reddit Avatar in a beat em' up style challenge or running game – this is the promise of what aNFTs can offer.

This approach stands in contrast to other NFT gaming efforts, such as play-to-earn and NFTs as in-game assets, which have drawn valid criticism from the gaming community. The aNFT format, paired with the innovative animation framework, "Gooji," is a powerful combination that has the potential to create a new wave of Web3 gaming, adding a new layer of utility and engagement for NFT communities.

## FAQs

### **What is the meaning behind the name "Gojira"?**

Gojira is a portmanteau of the Japanese words for "gorilla" and "whale." As the story goes, movie executives working on the original Godzilla film combined the words to describe the creature, which would become perhaps the most iconic monster of all time.

### **Are there other companies developing aNFT-integrated games?**

Currently, Gojira Labs is the only company developing games with native aNFT integration; however, by design, aNFTs can be utilized by other teams in their game development.

### **When will aNFT-integrated games be available to play?**

The first game utilizing aNFTs, Sprinft, will have its demo version available to play in Q2, 2023. Additional games are expected to roll out in Q3 and Q4 of 2023.

### **Will aNFTs be available as 3D or just 2D?**

Currently, aNFTs are available as 2D visuals; however, the team at Gojira Labs is evaluating a 3D variant of aNFTs that would allow for playability as a 3D asset.

### **Will Gojira Labs integrate AI to spawn aNFTs in the future?**

Leveraging AI to extrapolate the full aNFT character for popular PFP NFT collections is currently under evaluation; it is not something that will be available at launch, but it is a process we are hoping to leverage to further streamline NFT collection integration.

### **What other games are in development that include aNFT support?**

The team at Gojira Labs is busy evaluating other types of games to use aNFTs – these include a fighting game where players can fight against other aNFT users, along with standard card games like Poker and Blackjack.

### **What blockchain will aNFTs be minted on?**

aNFTs, just like regular NFTs, can be minted on any blockchain that supports non-fungible tokens. The initial support for aNFTs will be for both the Ethereum and the Tezos blockchains. Keeping in mind the differences in fees across blockchains, we aim to offer aNFT minting options on various platforms to cater to our users' needs and preferences. This flexibility allows you to take advantage of lower fees while still enjoying the full benefits of your aNFT.

### **How much does it cost to spawn an aNFT?**

To spawn an aNFT, you only need to cover the minting fee associated with the blockchain of your choice. We do not charge any additional fees, ensuring that you can enjoy your aNFT without incurring extra costs.

### **Will I be able to re-sell my aNFT?**

Yes. Like traditional NFTs, aNFTs will be owned by the user and able to be transferred or sold as desired by the user.

### **Are there any plans to create a dedicated marketplace for aNFTs?**

Yes, we have exciting plans in the works to create a dedicated marketplace for aNFTs, where all users will be able to create, trade, buy, and sell their own aNFTs with ease. Additionally, we are exploring customization features, allowing users to

## FAQs

personalize their aNFT characters.

### **Is my PFP NFT safe when I spawn an aNFT?**

Recognizing the critical importance of security for our users' valuable NFT assets, our expert team has diligently worked on developing the spawning mechanism that ensures the original PFP NFT is never compromised or exposed, providing absolute protection during the creation of an aNFT.

### **Which digital wallets are compatible for use with Gojira Labs games?**

Gojira Labs games provide compatibility with a variety of digital wallets on both Ethereum and Tezos blockchains. For Tezos, we support all wallets compatible with Beacon, including Temple, Kukai, naan, Umami and others. On Ethereum, we support MetaMask and all WalletConnect-supported wallets, which encompasses a broad selection of secure wallet solutions. Our inclusive approach allows users to seamlessly engage with our games using their preferred wallets on either blockchain.

### **Do the games support wallet delegation tooling like [delegate.cash](#) and [warm.xyz](#)?**

Yes, all Gojira Labs games will support wallet delegation tooling such as [delegate.cash](#) and [warm.xyz](#). As security is our top priority, we enable our users to utilize these services, thereby ensuring seamless access to their NFTs while maintaining the highest level of security.

### **Can you walk me through how wallet delegation works?**

Wallet delegation allows you to keep NFTs secure in a cold wallet while interacting with games or platforms using a linked hot wallet. Services like [warm.xyz](#) or [delegate.cash](#) facilitate this process to securely verify your NFT holdings, enabling seamless access to your NFTs without ever exposing your cold wallet in the process. Users can simply connect their linked hot wallet to sign in, and the game will then load the characters corresponding to the PFP NFTs present in the

cold wallet.

### **How does Gojira Labs address blockchain compatibility, considering that some of the prominent PFP collections are minted across various blockchains?**

Gojira Labs games are designed with multi-blockchain support from the start, seamlessly integrating the selected PFP collections along with their respective host chains. As the PFP landscape evolves and user preferences emerge, we remain committed to expanding our support for additional blockchains and collections.

### **What criteria are used to determine which PFP collections will be supported for aNFT creation?**

The criteria for supporting PFP collections for aNFT creation are guided by two key factors: the popularity of the collections and our users' specific requests. By attentively monitoring NFT community trends and valuing user feedback, we identify sought-after collections and align our support with the preferences of our users and the wider NFT community.

### **Can I play Sprinft without owning a PFP NFT?**

Yes, even if players don't have one of the supported collections to claim their own aNFT, they can still enjoy the full game and compete against others using our playful Gooji character. Our goal is to offer an inclusive and fun gaming experience for everyone.

### **Why is it called an "animatronic" NFT?**

An "animatronic" in the analog sense is a mechanical framework that allows inanimate sculptures to have mobility in a realistic and programmed way. aNFTs have the same function in the digital sense, and the term "animatronic" seemed appropriate as a characterization and nomenclature for the standard.

## FAQs

### **Can I play Sprinft on mobile?**

The games designed by Gojira Labs are built on Unity with seamless support for Web and mobile; at launch mobile will not be available, however that will be added soon after.

### **Can I accessorize my aNFT?**

Gojira Labs is working on additional accessory NFTs that can be used together with aNFTs to enhance the player experience. These will be owned by the users and tradeable as regular NFTs.

### **I have a supported PFP NFT, but I don't want to play the game. Can I loan it or monetize it?**

Holders of supported PFP collections will be able to spawn their own aNFT character(s) and manage their assets as they choose. An aNFT lending/borrowing function and marketplace is under consideration by Gojira Labs to facilitate the monetization of aNFTs by the holders if they choose to loan them for others to play with.

### **Are there any plans to introduce a native token for Gojira Labs projects?**

While we continually explore new opportunities to enhance our ecosystem, launching a native token is not on the immediate roadmap. Our primary focus is on providing innovative and fun gaming experiences to our users.

### **How can the aNFT community connect and interact with other aNFTcionados? Is there an official Discord server?**

Yes, we highly encourage the aNFT gaming community to join our official Discord server to connect with fellow aNFT enthusiasts or aNFTcionados and stay informed about the latest aNFT-related news and updates. (<https://discord.gg/SfK4ZSWrNA>)

### **How can developers or game studios get involved in implementing aNFTs into their own games or projects?**

We encourage all developers and game studios interested in implementing aNFTs into their projects to reach out to us at [inquiries@gojiralabs.com](mailto:inquiries@gojiralabs.com). Our team is open to collaborating and exploring potential partnerships, facilitating the seamless integration of aNFTs to drive innovation and contributing to the growth of the aNFT ecosystem.

### **I am creating my own PFP collection, who do I talk to about integrating it as aNFTs?**

We will consider adding new PFP collections based on user interest; please reach out to [inquiries@gojiralabs.com](mailto:inquiries@gojiralabs.com) with details and we will respond with further information.

### **I am an investor looking to invest in Gojira Labs, who do I contact to discuss further?**

Interested parties can reach out to [investors@gojiralabs.com](mailto:investors@gojiralabs.com) for information on how to invest.
